Abstract. One of the important issues of the modern information society is the question of the production, storage, processing and sale of information. Knowledge contained in the language is linked with concept of thesaurus in the meaning of "treasury", the repository. The prototype of such a repository is a dictionary. Dictionary-thesaurus is one of the ways to systematize vocabulary in the process of learning a foreign language. This article describes the associative dictionary-thesaurus "Houses and dwelling in the UK and the USA". The dictionary contains hypo-hyperonical relations, hyponymic relations with the following hierarchical chain: section "Existence in Space"; division "Houses and dwelling in the UK and the US"; subdivision "Types of houses and dwelling in Great Britain", Types of houses and dwelling in the USA. etc. Such innovative structure of the dictionary allows to display territorially-deterministic, culturally-marked lexicon, originality of its use and pragmatic features.

Key words: a thesaurus approach; a systematic stock, culturally-marked words; a dictionary; hypo-hyperonical relations; hyponymic relations, dwelling and houses.
1. INTRODUCTION

In the conditions of the "information explosion" that characterizes the culture of modern times, scientists are faced with the problem of how a person can master huge amounts of information. In recent years, the thesaurus approach has been increasingly applied in many areas. He showed his heuristics in cultural studies, in the framework of which the thesauriology is formed, a kind of subject culturology. The results of its application in sociology, philology and other areas of humanitarian knowledge are published for about 20 years. (Lukov & Lukov, 1992, p. 8 – 14) (Kovaleva & Lukov Val., 1999, p. 126-189) (Lukov, 2002, p. 8-19) (Lukov, 2003) (Vershinin, 2003) (Achaeva Pospelov, Pospelova & Subbotina, 2016. P. 121–127).

The central notion of thesaurus approach is thesaurus. Thesaurus – a book that lists words in groups of synonyms and related concepts; a dictionary or encyclopedia (archaic). Origin of the word. Late 16th century: via Latin from Greek θέασαρος 'storehouse, treasure'. The original sense 'dictionary or encyclopedia' was narrowed to the current meaning by the publication of Roget's Thesaurus of English Words and Phrases (1852) [Oxford Dictionaries]. Thesaurus is a reference book in which words with similar meanings are grouped together; a book containing a store of words, specif., a book of synonyms and antonym; a categorized index of terms for use in information retrieval, as from a computer [Collins Dictionary].

THESOURUS 1. A dictionary that reflects the semantic links between words, terms and other elements of the language. 2. A systematized set of concepts of a particular branch of science. This term goes back to the English vocabulary of R.Roger. Thesaurus is also understood as a dictionary that reflects the entire vocabulary of the language with an exhaustive list of examples of the use of words in texts. In the methodology this term is also used to denote a systematic stock of words necessary for communication on a given topic (Azimov & Shchukin, 2009, p. 302).

The thesaurus approach is an important direction in the systematic study of vocabulary. The object of the research of this article is the vocabulary related to the topic "Houses and dwelling", the subject of the study is the culturally-marked words and word combinations relating to the topic "Homes and dwelling" in the British and American English. The relevance of the article is determined by the increased need for the systematization and study of lexical units related to this topic, housing is one of the basic material conditions of human existence. Types of housing are determined by the level of development of productive forces, the nature of social relations, the economy, the forms of family life, cultural and everyday traditions and the diversity of the natural-geographical environment. In this regard, it is important to take into account the systematic nature of the semantic changes in this vocabulary.

The aim of the study – to develop a thesaurus of the linguistic-cultural nature of "Houses and dwelling" on the basis of American and British English versions.

Research methods: method of semantization, cultural analysis, descriptive method, retrospective analysis, a thesaurus method.

2. RESULTS AND DISCUSSION

The thesaurus "Houses and dwelling" was developed on the material of authoritative lexicographic sources, popular scientific literature and fiction (Longman, 2003) (Longman, 2005) (Webster, 1986) (Americana, 1996). The thesaurus includes British and American versions of the English language.

3. SUMMARY

In the presented thesaurus, the vocabulary of the language is distributed according to logical categories, each of which is divided into a different number of dependent categories. To find the right word in such a dictionary is difficult, if you do not give an alphabetic index of words at the end of the article. The approach in this work is “from concepts to words”. The dictionary helps to structure, classify and model the concepts and connections related to a particular scientific field. Since this dictionary is not encyclopedic, the examples given in a number of dictionary articles do not pretend and are not considered to be all-inclusive and exhaustive.

4. CONCLUSIONS

In this thesaurus a system of verbal connections is presented. The connections are paradigmatic (synonymous) and syntagmatic (contextual, idiomatic). In this system it does not matter what meaning the word has, but only what other words it can put in one row. This dictionary is very close to the subject dictionaries. The purpose of the thesaurus is to provide vocabulary in a systematic way, in accordance with the meaning of words for understanding the place of each concept among others, highlighting the main themes and patterns. The system of concepts is derived from the vocabulary of English. Thesaurus is an information retrieval tool. Links are both verbal and conceptual. The thesaurus approach is an innovative educational technology.
